

Lode Rehabilitation

Prioritizing patients, ensuring comfort throughout training or testing

Lode for rehabilitation

Our dedicated rehabilitation segment offers a comprehensive suite of ergometry products, meticulously designed to elevate your (cardiac) rehabilitation and training programs. At Lode, we understand the pivotal role reliable and accurate equipment plays in the recovery journey, which is why our offerings are not only durable but also exceptionally user-friendly.

Whether you're engaged in cardio rehabilitation or exploring the realms of prehabilitation, Lode is your trusted partner in achieving optimal patient outcomes.

Focus on your patient

Lode's focus is on simplifying the rehabilitation process, offering efficiency without compromising patient comfort. Thanks to flawless operation of the equipment, healthcare professionals can focus on providing the best possible care to their patients.

Our equipment supports various rehabilitation programs, catering to neurological, oncological, neuromuscular, and elderly patient groups. Moreover, we recognize the growing need for evidence in professional practice, which is why Lode provides the necessary hardware and software for frequent testing throughout the rehabilitation process.

Total solutions

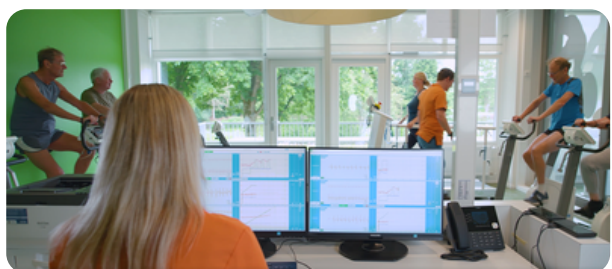

Our hardware lineup includes bicycle ergometers, a treadmill for lower extremity rehabilitation, arm ergometers for upper extremity exercises, and the innovative Esseda Wheelchair ergometer among other products. You can choose from multiple models ergometers, treadmills, and accessories tailored to the use. Lode products are designed to be used by people of all body postures. There are also models available for children.

Beyond our hardware, Lode integrates advanced software solutions to create a complete ecosystem for patient rehabilitation and training. The Lode Rehabilitation software (LRM and LCRM) empowers healthcare professionals with precise control over Lode rehab devices, allowing predefined protocols, real-time progress tracking, and comprehensive vital sign monitoring with up to 16 devices at the same time.

What people say

“By using Lode's equipment, it was possible to continuously measure heart rate and power output during training sessions. This data is relevant to see which training is effective for whom.”

Dr. J. Hartog - University Medical Center Groningen
